■ Pseudorabies in feral swine illegally imported into Colorado from Texas

Pathogen: Virus ; **Transmission:** Direct contact, in utero; **Species affected in event:** Swine

① Colorado Parks and Wildlife (CPW) officers confiscated three feral swine from a farm in El Paso County, after hearing reports that the homeowner was raising feral swine illegally imported from Texas. The team found three of the wild pigs in a small barn and euthanized them. Blood samples were sent to a lab for analysis and tested positive for pseudorabies. CPW is working with the USDA to trace the pigs back to their original herd in Texas to stop further movement of infected swine.

● Undiagnosed respiratory disease in Brazil

Pathogen: Unknown ; **Transmission:** Unknown ; **Species affected in event:** Human

① Residents of Cametá, in northeastern Pará, are concerned about a wave of death in patients who manifested respiratory syndromes and hemorrhages in recent weeks. Since December 15th, at least six people have died after experiencing shortness of breath, coughing, fever, chest pain and hematemesis (vomiting blood). All were being treated at the Regional Hospital of Cametá. In addition to the six victims, a seventh person was seen at the unit, but was discharged.
