Highly Pathogenic Avian Influenza H5 in Ecuador

Pathogen: Virus ; **Transmission:** Direct contact, aerosol, fomite; **Species affected in event:** Poultry - layers

① Ecuador has reported its first-ever outbreak of HPAI H5 in domestic poultry. The WOA report indicates the outbreak occurred at an egg laying farm in Chaguana with 180,100 chickens of which 49,900 (~28%) had died. Testing was done at Agrocalidad's Animal Diagnostic Department Laboratory, and those tests came back positive with a confirmation date of November 25. The exact serotype of the virus found has not yet been determined, but it is known that it is an H5 variant.
