

February 26th 2024 – March 3rd 2024

SUMMARY: RELEVANT SIGNALS (includes all signals rated ≥3.0)

No relevant events to report this week

NEW EVENTS: (events rated > 2)

■ African Swine Fever in Albania

Pathogen: virus; **Transmission:** direct contact, fomite, vector; **Species affected in event:** swine

① ASF has been reported in Albania for the first time. ASF was found in two wild boar in a forest in the Kukes region in North West Albania, close to its borders with North Macedonia and Montenegro, both of which have reported ASF outbreaks recently. The disease was confirmed by the Food Safety and Veterinary Institute on February 10 and reported to WOAH on February 26.

● Varroosis of honeybees in Australia

Pathogen: N/A - mite; **Transmission:** N/A; **Species affected in event:** honeybee

① A single *Varroa jacobsoni* mite was detected in one of six sentinel hives at the Port of Brisbane, Queensland. Confirmatory diagnosis was received on February 26, 2024 from the Commonwealth Scientific and Industrial Research Organisation (CSIRO). Mitochondrial DNA cox1 sequence data from the single mite revealed *Varroa jacobsoni* (Java 2 haplotype). This confirmation together with the location of the detection at the Port of Brisbane suggests this is a new introduction into Australia and not related to the current *Varroa destructor* incursion in New South Wales. A complete examination of the brood comb, hive debris and bees from the hive where the single mite was detected, has not resulted in further detections and indicates that reproduction has not occurred.

◆ Halicephalobus gingivalis in Quebec

Pathogen: parasite; **Transmission:** direct contact; **Species affected in event:** equine

① On February 5, 2024 an Icelandic gelding in Estrie, Quebec, was determined to be positive for *Halicephalobus gingivalis* based on histopathology. The horse was imported from Iceland over the summer and is now deceased. *Halicephalobus gingivalis* is a saprophytic nematode parasite that causes a rare form of fatal meningoencephalomyelitis in equids, humans, and ruminants.

CONTINUED EVENTS: (events rated ≥ 2.4)

New World Screwworm in Costa Rica	No. of Signals: 01	No. of weeks in report: 03	Avg. Rating: 2.5
• Costa Rica has reported its first human infection of new world screwworm; the case is a man from the Altamira de Pavones area, who visited the Ciudad Neily hospital due to discomfort after suffering a fall			
African Swine Fever in Europe	No. of Signals: 13	No. of weeks in report: 152	Avg. Rating: 2.0 – 2.4
<ul style="list-style-type: none"> • Estonia has confirmed its first case of ASF in a wild boar • Norway is stepping up controls against ASF and is now aiming for nationwide eradication of wild boar • Serbia has reported cases of ASF in domestic swine • Serbia, Ukraine, Latvia, Hungary, Romania, Poland, and Italy have reported cases of ASF in wild boar 			
Highly Pathogenic Avian Influenza in North America	No. of Signals: 03	No. of weeks in report: 105	Avg. Rating: 2.0 – 2.2
<ul style="list-style-type: none"> • Canada has not reported any new outbreaks of HPAI over the last week • Over the last week, the USA has reported outbreaks of HPAI in WOAH non-poultry in: Minnesota(1), New York(1), and Ohio(1) • Florida has reported HPAI in dead swans found in Lake Eola 			
Highly Pathogenic Avian Influenza in Europe	No. of Signals: 13	No. of weeks in report: 167	Avg. Rating: 2.0
<ul style="list-style-type: none"> • Moldova, Poland, and Germany have reported HPAI H5N1 in domestic poultry • Germany, Slovenia, the UK, Ukraine, Poland, and Hungary have reported HPAI H5N1 in wild birds • A summary of the overall HPAI situation in Europe is available here 			
Highly Pathogenic Avian Influenza in Asia	No. of Signals: 02	No. of weeks in report: 131	Avg. Rating: 2.0
<ul style="list-style-type: none"> • Taiwan has reported an outbreak of HPAI H5N1 in a chicken farm in Jiali District • India has reported additional outbreaks of HPAI in domestic poultry, in districts (Chittoor and Tirupat) surrounding the initial outbreak reported last week (Nellore)

Disclaimer

This intelligence report is intended to provide information to risk managers about emerging and zoonotic disease events that could pose a threat to Canada. It is based on information signals acquired and selected from twenty-one distinct disease surveillance sources via the Knowledge Integration using Web-based Intelligence (KIWI) tool hosted on the Canadian Network for Public Health Intelligence (CNPHI) informatics platform. The report is based on the activities of the CEZD Community of Practice and subject to change based on evolving user needs.
